

We are not hunters...

But nature lovers and defenders. We share an outlook on life and a sustainable and responsible lifestyle. We get our food from nature. And we feed nature. We protect. We care for. We maintain. We breath in the earth, water, dust and pathways. And we enjoy it. Because we are committed to what we love. An age-old pact. We are the past. And the future. We believe in life beyond the towns and cities. And that hunting and fishing are activities for the defence of our planet. That our planet has a heart: the heart of those of us who live our lives with respect, intensity, commitment and passion. We love what we are. We are what we love.

MATERIALS AND TECHNOLOGY

Generally speaking, we are comfortable when we are neither shivering nor sweating. Heat is the main source of discomfort. We don't loose or gain cold, we loose or gain heat. With Hartware concept we have targeted the following goal: to develop outdoor sport clothing and footwear equipment the best we can to control heat transfer and gain comfort in any level of activity. We have developed this label as our top Hart range to wear: Hartware. It is our natural Selection.

EDS (Ergonomic Design System) concept has a target: to develop the most innovative and technically advanced hunting apparel with designs that improve Hart garments' performance in terms of comfort. The human body is full of bones and muscles that show us how to develop our second skin, our clothing. Physical activity is one of the main issues in hunting.

Therefore, our hunting apparel must always follow our anatomy looking for ergonomics in all our movements.

Products under this label contain 4-way or 2-way stretch fabrics constructed with elastic fibers. They are performance-fit outwear, basically designed for hunting, suitable for hiking and other outdoor activities but also very comfortable for casual wear. You can be sure that our XTRETCH DYNAMIC apparel can handle the pressure of demanding physical activities.

The products treated with ABT prevent the growth of bacteria and fungi that cause bad odour.

DRY SYSTEM

DRY SYSTEM technology delivers following advantages to your garment. Wick dampness away from the body. Breathability. Super lightweight. Quick-drying of the fabric. Easy to care for.

Cotton Diamond Line (CDL) is a light and cool tough-wearing cotton canvas fabric developed for warm-weather shooting. PU coated to ensure a waterrepelent function and Teflon™ coated for strengthen fibres, the breathable cotton yarn is woven tight enough to fend off brush and

a waterrepelent function and Teflon™ coated for strengthen fibres, the breathable cotton yarn is woven tight enough to fend off brush and insects yet light enough to remain cool. The material is usually prevashed at the factory, and then the entire cloth is re-washed to soften it. CDL clothing is lightweight and durable, perfect for warm-weather walkup hunts.

Stretch fabric with elastic components made of a mixture of Nylon, Polyester and Elastane. It is used as protection in garments where we need extra reinforcement, but also freedom of movement to enter areas of dense vegetation.

This multifunctional fabric series combines Nylon and Polyester yarns coated with an innovative abrasion resistant and non-slip glue. It's one of the best protective materials for sport and outdoor garments. Its properties include excellent abrasion resistance, non-slip function, tearing resistance and cut-resistant function. Thanks to these qualities, it is a perfect thornproof defense.

HHL Technology[™] Vital Protection is a revolutionary and long-lasting insect repellent that can help you avoid nasty, itchy bites or, even worse, serious illness. Vital Protection provides also anti-bacterial functionality, preventing odours, discolouration and degradation, ensuring fresher, more hygienic and durable fabrics. Environmentally friendly, non-irritant and biodegradable.

Bamboo fiber is naturally anti-bacterial, highly breathable and enviromentally friendly. It is also very soft to the touch and comfortable. Anti-Bacterial: the antibacterial elements in bamboo fiber keeps bacteria that cause bad odour away from the textile. Breathable: due to the construction of bamboo the garment is more breathable, comfortable and thermal regulating than most other comparable fibers, thereby keeping you cooler, drier and more comfortable all day. It is also hypoallergenic and totally organic.

CE - PERSONAL PROTECTIVE EQUIPMENT (P.P.E. CAT II) - High-Visibility Safety Apparel.

All the clothing marked with this logo has been certified and registered as P.P.E. (Personal Protective Equipment) by a Notified Organisation. This cerfitication confirms that the standards and legislation about PPE high-visibility safety apparels have been fulfilled. This standard has been certified in compliance with the PPE rules for the construction, production and maintenance of high-visibility safety apparel to improve hunters safety routinely exposed to the hazards of low daylight visibility while hunting.

comfortemp*

FREUDENBERG

Innovative Comfortemp® fiberball is the very first padding in the world to be made of individual, yet interconnected, little fiberballs. Insulation properties are 50 to 80 percent better than with conventional paddings. The thermal retention is comparable with down. As the padding is comprised of many little fiberballs, many little cushions of air develop in the material. This leads to a high degree of breathability as well as thermal insulation. Small air pockets between the many fiber balls ensure a high, consistent thermal capacity.

Garments with comfortemp® fiberball padding don't need to be quilted at all. This enables much greater freedom in design.

The high-performance, washable and fast-drying padding is very light and offers excellent insulation values as well as optimal breathability. This is because the fiber balls that give the product its name create a special pore structure. Garments with this insulation provide very high wearing comfort and an extremely soft and fluffy feel.

HDI HIGH DENSITY INSULATION

HDI technology (High Density Insulation) conserves body heat and doesn't trap the moisture generated in physical activities. Its high density synthetic microfibers provide a high level of insulation without compromising the weight of the garment. These microfibers trap the warm air molecules generating a natural barrier against low temperatures in order to preserve the heat produced by body. This system maintains its insulation capacity even in humid conditions thanks to its low liquid absorption capacity. This helps the quick drying of the garment.

When we over-heat, we perspire, regardless of what we are wearing. At some point, extreme heat, humidity, or heavy perspiration can overload the vapour transmission capacity of any clothing, even a cotton T-shirt. When the system is overloaded, moisture accumulates inside and discomfort often results. Osmotech technology is a fabric mix that includes very breathable outwear plus high waterproof features. This system is less likely to overload and cause discomfort than less breathable, waterproof products.

H-AIR knitted fleece technology provides a high degree of insulation. By mapping the body and the characteristics of each area, H-AIR technology uses different levels of fibers (High / Medium / Light) to achieve the perfect balance between insulation, breathability and comfort. Is the perfect choice for upper garments that need to provide that extra warmth requested when temperatures are cool. H-AIR knitted fleece fabric is built with a special mix of fibers that give

a lambswool-like effect. This special fabric is processed to produce a melange-effect finish on the outside and a warm and cozy brushed fabric on the inside.

CE-PERSONAL PROTECTIVE EQUIPMENT (PPE Cat II) - Wildboard protective pants.

This certification gathers the composition of the garment and guarantees its confection with fabric anti-impact resistant to perforations, similar to those caused by the attack of a boar.

Osmotech plus means one step beyond in the waterproofness and breathability of our HART garments. Made in PTFE, this membrane means high waterproofness (over 10000 mm) and breathability (10000 gr./m2). Either laminated to the outshell fabrics or used as a layer, Osmotech plus really improves the comfort of our functional clothing.

Windtech products are outerwear or accessories with a weather protection layer function.

They are made from air-permeable fabrics such as knit or fleece fabrics laminated to the Windtech membrane to make them windproof. Windtech fleece's high versatility provides greater comfort over a broad range of temperatures and activity levels.

MEN'S COLLECTION

The utmost updating of the succesful Irati concept: perfect noiseless, strong and waterproof pant. Silent and resistant Toplon fabric combined with micro-Toplon fabric in high-activity areas. Comfort and strenght in technical pants. EDS: Ergonomic Design System.

8-pocket construction: 2 waterproof zipper bias pockets, 2 side cargo pockets with waterproof zipper overpockets and 1 back zippered pocket.

Reinforcement layer on bottoms for preventing tear and wear caused by high boots.

Waterproof PTFE 0SM0TECH+ membrane and taped seams. High waterproofness (10000mm) and breathability (10000 gr/m²).

NEW HYBRID CONCEPT

Windy or chilly days can't beat this insulated hybrid hoodie jacket. Combining innovative materials with cutting edge design, the SENDAI Hybrid Jacket is an exceptional insulated garment in winter both for everyday use or for outdoors hike.

Innovative Comfortemp[®] fiberball is the very first padding in the world to be made of individual, yet interconnected, little fiberballs. Insulation properties are 50 to 80 percent better than with conventional paddings. The high-performance, washable and fast-drying padding is very light and offers excellent insulation values as well as optimal breathability.

The SENDAI hybrid is a light and technical puffer jacket with a hood, and works perfectly as a pre- or post-hunting or leisure jacket.

Fake suede's soft handfeel on body and arms combines with H-AIR fleece's gorgeus woollie look and mélange colors to provide warmth and style.

Quick access to your essentials in two zipped hand-warmer pockets and two internal open pockets.

Added protection from cold thanks to a fixed and adjustable hood. Drawcord at the hem deliver added comfort and adjustability.

REFERENCE XHSEJ + Size Sizes: S, M, L, XL, XXL, 3XL

COMPOSITION Shell 1: 100% Polyester. Shell 2: 85% Acylic, 15% Polyester. Padding: 100% Polyester. Lining 1: 100% Polyester.

The Hart MITO can be used both as a top layer and as intermediate layer depending on temperature and weather. The perfect garment for your next hike, walk.

MITO-J

The jacket is divided into two materials: chest and bottom back are padded and wind proof, and remaining material is stretchy and pliable like a sweater. Inside there is also a thin layer of microfleece so you can stay warm. Easy-entry handwarmer pockets with zipped closure keep what you carry secure. In order for you to be able to take on all types of outdoor activities, the material also has the ability to transport moisture away from the body and a good breathability.

HA

The TRAKAI rubber boots line uses high quality materials to ensure maximum waterproofness and comfort for the hunter.

Vulcanized with a mixture of natural rubber and EPDM, they offer high abrasion resistance. (EPDM is a polymer that stands out for its high resistance to heat and weather conditions).

It incorporates reinforcements around the foot, especially at the heel and toes, getting a flexible and durable boot.

Internal insulation in 4.5 mm SBR neoprene, which provides greater warm compared to other types of linings.

Dynamic comfort insole with gel base to optimize cushioning and stability on each step.

Resistant sole that grabs perfectly in the mud, but without taking it attached.

12″ rubber bootie with 4.5mm neoprene lining.

TECHNOLOGY

Nestfit

Unrivaled support, unbelievable comfort. The first shoes truly created to fit the human foot. The NestFIT last was born out of measurements taken from some 20,000 individual feet. The upper, insole, midsole, and outsole mold perfectly to the unique contours of your foot, providing a custom fit unlike any other and eliminating gaps for unmatched comfort.

TREKSTA combines GORE-TEX® membrane with seam sealing process with GORE-SEAM® TAPE. The result is a boot with a guaranteed and durable waterproof protection and maximum breathability. GORE-TEX® membrane is laminated to the boot's lining fabric to create a high-performance textile.

The expanded PTFE portion of the membrane contains over 9 billion microscopic pores per square inch. These pores are approximately 20,000 times smaller than a drop of water, but 700 times bigger than a molecule of moisture vapour. So whilst water droplets cannot penetrate the GORE-TEX® membrane, moisture vapour (a gas) can easily escape.

The Boa Lacing System provides a dramatic improvement over shoelaces for almost any kind of performance footwear. In BOA, low friction and the Elongated Lace Guides™ combine to eliminate pressure points and provides a unique glove like fit in your boots.

TrekSta footwear with IceLock in outsoles offers the best traction available on ice and snow.

Micro-glass filaments are electrostatically aligned in the rubber compound of the sole creating slip-stopping surface tension. The vertically-aligned filaments will be exposed for the life of the sole, ensuring a solid grip as they wear.

Treksta's I.S.T technology allows your feet to adapt to the abnormal and uneven surfaces through independently moving outsole structure.

The principle is simple. Each lugs move independently, and they move vertically up and down. If one lug steps on a foreign object, it automatically moves up to adapt to the surface.

Hypergrip produces the most advanced outsoles in the World implementing exclusive technologies. Key features:

- Superior traction on dry and wet surfaces.
- Exceedingly high wear resistance.
- Stability and lightness. - It does not degrade or discolor.

FIBRES

NATURAL FIBRES / HYDROPHILIC:

MERINO 100% NATURAL WOOL

Merino sheep's wool, because of its greater length (65-100 mm) and thinner diameter of its fibres (less than 24 micron), results in a softer yarn with finer curls pleasant to the touch. The fibre's core is hydrophilic (retains moisture) and breathes. Since this fibre heats up, even when humid, this is the middle fibre in the T3 Lorpen for colder temperatures.

SYNTHETIC FIBRES / HYDROPHOBIC:

COOLMAX

Coolmax[®] is a polyester yarn from Invista[®] with channels to efficiently transport moisture away from the skin to the outside of the sock.

👽 PRIMALOFT.

MerinoBlend

A polyester developed by Primaloft® (the worlds best artificial thermal insulator in technical garments). It creates a soft fibre, thermal insulation, hydrophobic that expels and doesn't absorb moisture.

This is an intimate mix of merino and acrylic that results in a

very pleasant to touch yarn that improves comfort.

HYBRID FIBERS:

MerinoDry

The new "MerinoDry" fibre mixes and complements the main benefits of superfine merino wool with synthetic polyester that improves moisture management and dries faster, providing greater resistance.

TECHNOLOGY

NEW LIMITS IN SOCK TECHNOLOGY: 3 LAYERS AGAINST BLENDS

Lorpen is the only sock brand in the world that manufactures socks with 3 layers of yarn differentiated (T3 Technology). It includes:

- A hydrophobic yarn in contact with the skin that wicks the moisture outside keeping the skin dry.
- A hydrophilic yarn in the mid-outer side that absorbs the

moisture out of the skin and spreads it for a faster drying. • A resistant yarn in the outside (usually Nylon) that protects the areas most exposed to friction depending on type and level of activity.

Technical Socks

Lorpen Technologies

Et

Knee-length sock for the extreme cold with an anatomical design (left/right foot) and three layers of fabric in the foot made up of two layers of Polartec Power Stretch[®] multi-elastic fabric with a Primaloft[®] insulation layer in the middle.

V PRIMALOFT.

Content: 81% Polartec Power Stretch, 10% $Primaloft^{\oplus}, 6\%$ Nylon, 2% Thermolite^, 1% Stretch Nylon with Lycra*.

4	HIP (CM)	96	100	104	108	112
5	LEG(CM)	77	78	79	80	81

CHEST. Wrap a measuring tape around the highest position of body under your arms.

ARM. From shoulder with your arm slightly bent, follow the tape around to your wrist bone.

WAIST. Wrap a measuring tape around your natural waistline, or in the position you usually wear your trousers.

HIP. Wrap a measuring tape around your hip.

LEG. Should be measured from crotch to the floor. For this it is best to take an existing pair of pants you like and measure along the garment inseam from the crotch seam to the hem.
